		Position of the rider			
		Effective and Efficient use of intermediate aids			
		Quality of Contact; Connection of forward movement			
		Quality of Performance			
		Stabilization of Horse*			

This test is to be ridden on passive, light contact. The horse should move forward freely with soft acceptance of the bit. * Stabilization of the horse is achieved when the horse's performance and overall presence is calm, cooperative, balanced, and appears independent of the rider's aids.
